

# ScienceDirect 阅读打卡积分挑战赛

报名火热进行中!

🕒 活动时间 2023年4月1日-6月30日

- 📖 活动规则
- 1 前往ScienceDirect读享社区
  - 2 发布阅读笔记、互动签到以及邀请好友加入
  - 3 点赞/被点赞、评论/被评论

获取积分，赢取丰厚奖品

月度惊喜奖励 (单月积分前30名用户获得)

学期大奖 | 个人奖 (积分累计前6名用户)

一等奖: 1名

¥3399

二等奖: 2名

¥2288

三等奖: 3名

¥1899

积分兑换

你也可以前往个人中心，  
使用积分兑换爱思唯尔官  
方周边礼品。

立即报名  
“码”上参与!

# ScienceDirect 阅读打卡积分挑战赛

## 丰富奖品 邀你来战

活动介绍

作为全球领先的同行评议学术文献平台，ScienceDirect (www.sciencedirect.com) 全面助力睿智研究，帮助科研工作者增进其检索、发现、阅读、理解和分享学术研究的方法。

为了进一步帮助科研工作者提升文献阅读技巧，培养良好的文献阅读习惯，助力科研进步，爱思唯尔举办“思唯学苑ScienceDirect读享社区”阅读打卡积分挑战赛。

**Use Boolean operators to combine multiple terms:**

- Boolean operators currently supported include AND, OR, NOT, and the hyphen (or minus symbol)
- Boolean operators must be entered in all uppercase
- The hyphen (or minus symbol) is interpreted as the NOT operator

**For example:** `black -hole` will return results containing 'black', but exclude any instances where 'hole' appears with it.

- Boolean precedence is as follows:

1. NOT
2. AND
3. OR

**NOT****AND****OR**

- Parentheses can be used when nesting clauses so the grouping is clear

**For example:** For `a OR b AND c`, enter `a OR (b AND c)`

- Quotation marks can be used to specify terms which must appear next to each other

**For example:** `("heart attack" OR "myocardial infarction") AND diabetes AND NOT cancer`

## 高级检索

Abstract

摘要

**Capsaicin**, the main pungent ingredient in “hot” chili peppers, elicits burning pain by activating specific (vanilloid) receptors on sensory nerve endings. The cloned vanilloid receptor (VR1) is a cation channel that is also activated by noxious heat. Here, analysis of heat-evoked single channel currents in excised membrane patches suggests that heat gates VR1 directly. We also show that protons decrease the temperature threshold for VR1 activation such that even moderately acidic conditions (pH ≤ 5.9) activate VR1 at room temperature. VR1 can therefore be viewed as a molecular integrator of chemical and physical stimuli that elicit pain. Immunocytochemical analysis indicates that the receptor is located in a neurochemically heterogeneous population of small diameter primary afferent fibers. A role for VR1 in injury-induced hypersensitivity at the level of the sensory neuron is presented.

## Abstract

**Capsaicin**, the main pungent ingredient in “hot” chili peppers, elicits burning pain by activating specific (vanilloid) receptors on sensory nerve endings. The cloned vanilloid receptor (VR1) is a cation channel that is also activated by noxious heat. Here, analysis of heat-evoked single channel currents in excised membrane patches suggests that heat gates VR1 directly. We also show that protons decrease the temperature threshold for VR1 activation such that even moderately acidic conditions (pH ≤ 5.9) activate VR1 at room temperature. VR1 can therefore be viewed as a molecular integrator of chemical and physical stimuli that elicit pain. Immunocytochemical analysis indicates that the receptor is located in a neurochemically heterogeneous population of small diameter primary afferent fibers. A role for VR1 in injury-induced hypersensitivity at the level of the sensory neuron is presented.

**题目**

Paper title

Quantum turbulence simulations using the Gross–Pitaevskii equation: High-performance computing and new numerical benchmarks

**摘要**

Paper abstract

We present high-performance and high-accuracy numerical simulations of quantum turbulence modelled by the Gross–Pitaevskii equation for the time-evolution of the macroscopic wave function of the system. The hydrodynamic analogue of this model is a flow in which the viscosity is absent and all rotational flow is carried by quantized vortices with identical topological line-structure and circulation.
